The Innovators

The New Original

Give people the tools, and they will build incredible stuff.

That is what it is about, and what it has always been about. We started this journey way back in 1982, creating the worlds first modular aluminium trussing system. That invention, and everything that has followed, has been driven by recognising the needs and demands of a fledgling industry that has since become a global phenomenon – the live events. For us, this means facilitating the build and rebuild of literally thousands of structures every year, and the according stories of excitement, emotion and joy that are so fundamentally human. So for us that defines it, the need to innovate, to enable and ultimately to continue working towards our end goal: to help you build incredible stuff.

Some history. And the future.

Our founding shareholders all share a connection, back in the early days of the phenomenon that is aluminium trussing. Pioneers and visionaries, together responsible for countless innovations that have framed the landscape of todays marketplace. A casual discussion in Leeds, UK, brought together a few of those bright minds, separated by the passing of time. They started with a simple question – how would we do this better? Cappuccino's were consumed, and some thoughts were sparked, with the kind of spark that is hard to extinguish. A simple conclusion; what was missing, was passion, and simplicity of purpose that comes with that. Oh, and the right team, a combination of all the experience and lessons learned, with young, dynamic people to drive the future forward. And so the formula for SIXTY82 was discovered...

Bringing together over 100 years of entertainment industry leadership of our shareholders, the company is a British, Dutch and French alliance designed specifically to bring a fresh view in to the market. Headquartered in Drachten, Netherlands, SIXTY82 has every component required to change the way that lightweight structural systems are used. All over again.

Simplicity. By definition, in purchase, in use and in support.

By Definition. In order to do great work, tools need to be a facilitator, not a distraction. They need to work intuitively, be easy to understand yet far reaching in their capability. We call this wide platform modular engineering; behind that we have the strongest technical team in the industry. Their aim is to rationalise products by improving them; reducing inventory, save time and diminish the carbon footprint.

In Purchase. This means that we will have a razor sharp catalogue that is capable of supporting every build: nothing else. In turn, the experience and knowledge of our dedicated SIXTY82 sales centres will work to ensure rapid availability of every component. We fully understand that non delivery could mean no show.

In Use. With form following function and a restless drive to reduce waste, excess and complexity, our products will be better to work with. From our improved load performance and high production accuracy to the world-first RFID integration. We are producing products that are both easier and more reliable in use. This leaves room for imagination and creativity and ensures that your end result will be better than ever before.

In Support. We have learnt over the years that our products can only perform with the right level of support. To that end, we have the strongest technical team in the industry, who are here for you if you need any help, from the start of the project to the very end. They are inspired by working every day to ensure that our partners push the boundaries to do incredible things.

Technical Innovation

Technical innovation is at the heart of what we do. This year, we are delighted to launch with a number of world firsts in the trussing and staging industry. Our commitment is to support our technical team deliver innovations and new product launches every season – all designed into a modular roadmap to allow you to efficiently scale your investment – and build incredible things.

RFID Ready

Together with our partners we have combined multiple new technologies into a borderless product management platform. Our RFID system will allow seamless tracking of products, both physically and in terms of technical and origination data. This will give you the confidence that you are using the right products in the right way, every single time.

TÜV Approved

SIXTY82 is employing some leading figures in the field of temporary demountable structures. These people have been involved since the beginning of this century in developing standards in Europe. Accordingly, all of our products are calculated, independently approved and assessed to the latest standards. Furthermore, as the technical pioneer of many industry leading technologies, SIXTY82 designs its products with integration in mind. This means that technically challenging constructions can be achieved with the same simplicity and peace of mind as the use of individual products.

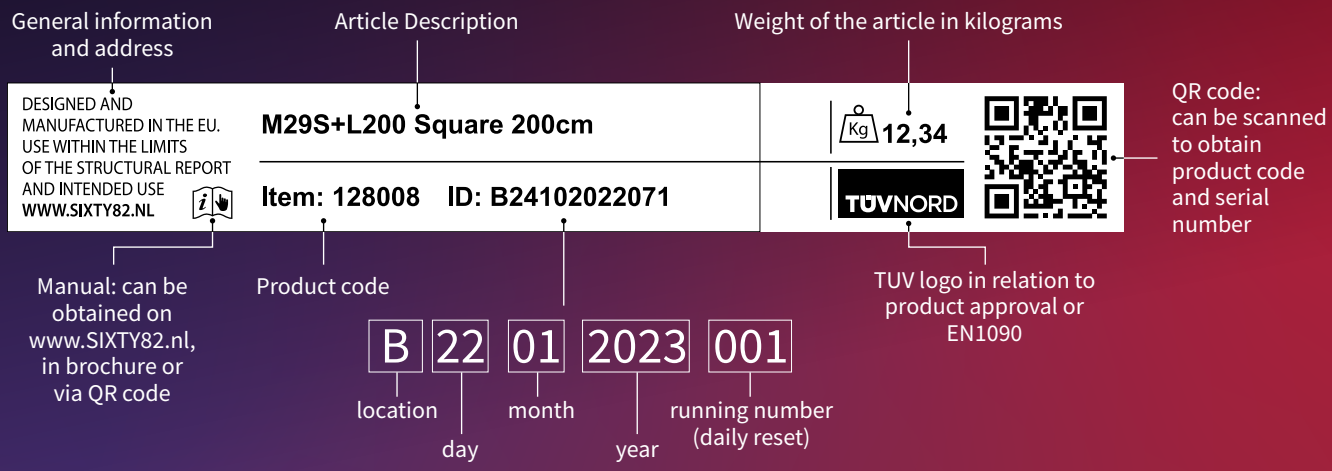
Clear technical information, available anywhere

With the SIXTY82 app, and our roadmap for RFID integration, we will provide a single support platform which will guide you through the use of our products. This means that you can easily retrieve load, construction and compliance information wherever you are, in a simple and intuitive way. The platform will continuously be updated with new innovated functionalities such as our SIXTYView and the 3D visualiser, as we develop new technologies driven by our users.

Platform Simplicity

Our promise. Every product will provide solid, reliable service with a simplicity of application. You will get great advice and find a clearer and more focused product range. This means that you will need less different parts in order to achieve more; saving time, space and costs.

Product **Personality**



In this environment, it is vital that you know both the origin and the capabilities of every product that you work with. However, product specifications, traceability and user data have long been a cumbersome for companies and individuals working in this industry. Until now. We believe that simple, accurate information is a cornerstone of safe building. Accordingly we are proud to launch a suite of tools which centralise data and facilitate easy reference, either physically or digitally, at all times. Our Product Personality system, gives a unique identification to every product and links data about its specific manufacturing process, and TUV certifications. This is unified by an online database of component information and user manuals, and tied to each individual SIXTYTag. Meaning you have multiple ways to get all of the up to date information of the product and its use, anywhere and any time.

SIXTY**Tag**

The functionality of our Product Personality system is further enhanced with the SIXTYTag – which is standard on every section of trussing that we produce. This unique development of RFID technology combines a special tag with specific extrusion and mounting design. As a result it is optimised to maximise reading accuracy. It is used within SIXTY82 for the management of stock and designed to facilitate open integration with other systems, enabling the growth of digital asset tracking. We have a roadmap for the development of this unique technology with enhanced functionalities such as EN inspection management and global stock with real-time availability.

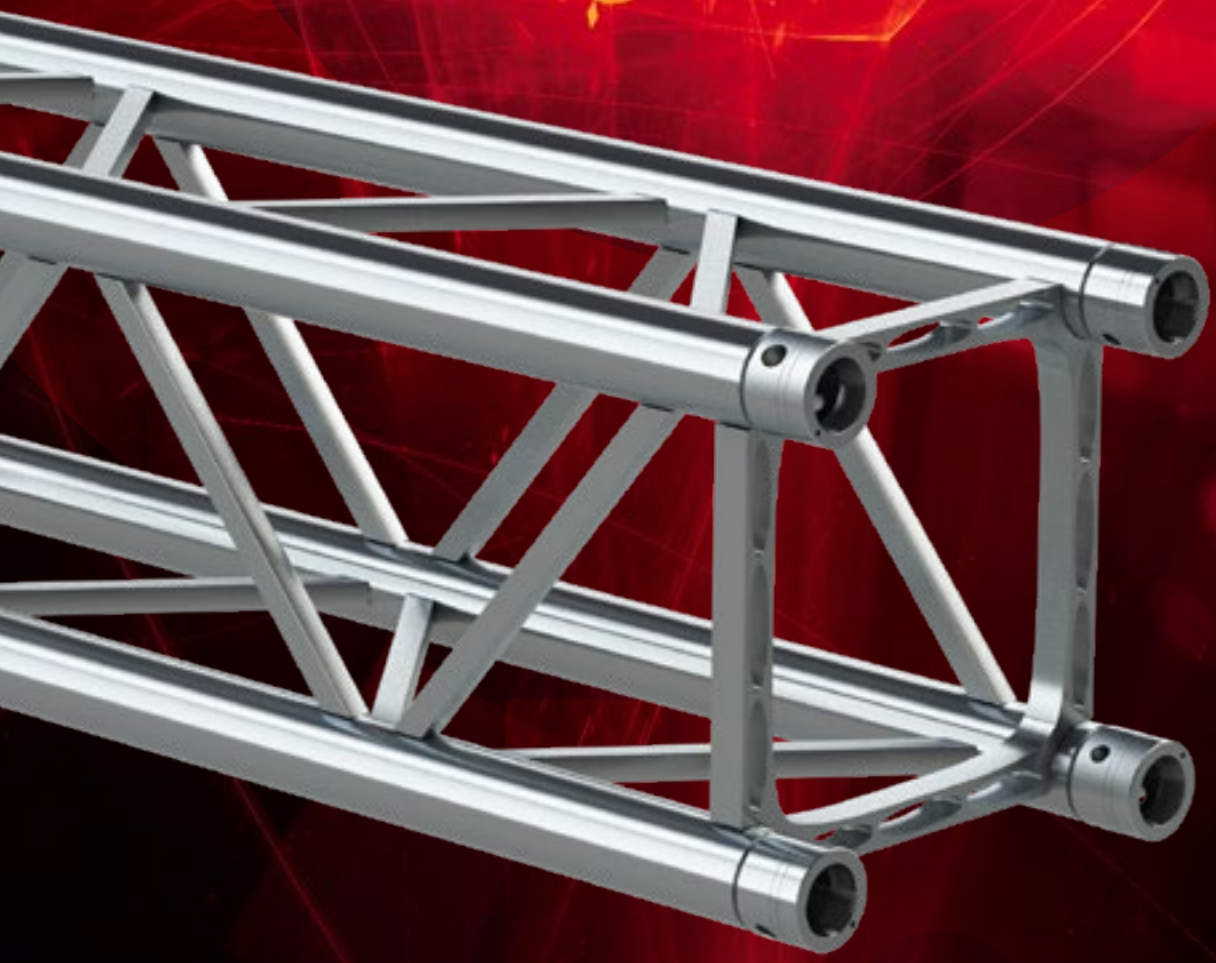
[TPM]

TRUSS SERIES



WORLDWIDE PATENT

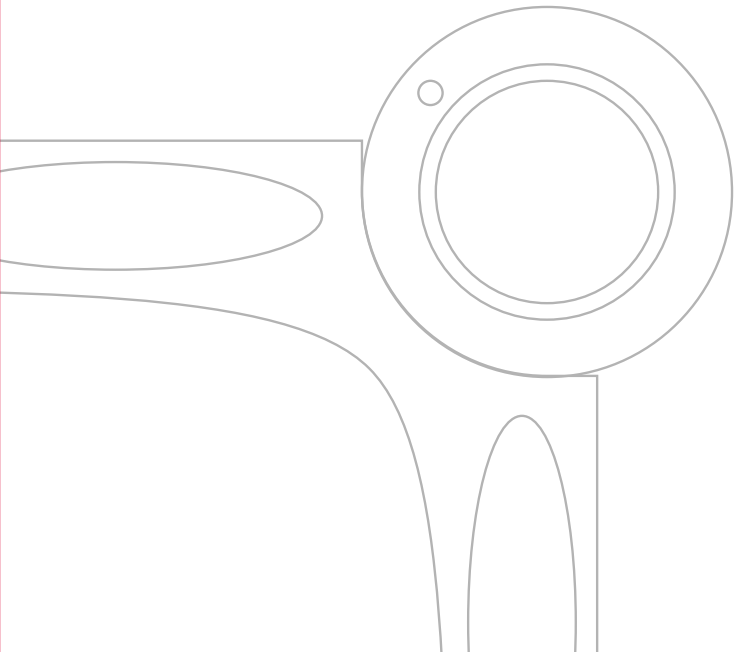
WE MADE IT FROM ONE PIECE

A REVOLUTIONARY DESIGN

Introducing the TPM Truss Series by SIXTY82 – the most revolutionary aluminum truss on the market!
Our team at SIXTY82 has spent countless hours researching and developing the perfect aluminum truss, and we are thrilled to finally unveil the TPM Truss Series.

What sets our truss apart from all others is its strength.
We've designed it to be up to 25% stronger, ensuring that your structures will be able to withstand even the most demanding conditions.
And our truss is more than just strong – it's also versatile. It can be used for a wide range of applications, from small events and exhibitions to large-scale concerts and festivals. And with its sleek, modern design, it will add a touch of sophistication to any setting.

Don't just take our word for it – try the TPM Truss Series for yourself and experience the difference.
We're confident that once you do, you'll never go back to using any other truss.



UP TO **25% STRONGER**

BOUNCE AND **SMASH PROOF**

PERFECT FIT

100% INTER**CHANGEABLE**

EASY TO PLACE **LIGHTING FIXTURES** BECAUSE OF END FRAMES

REDESIGNING THE STANDARD

At Sixty82 we have set our self the challenge to re-invent the most used truss type, the M29 Series. The goal was to create an evolution on the standard truss, with beneficial properties over the current M29 Series, while remaining fully interchangeable with the current series.

To achieve these unique properties, we have put countless hours in researching the best solutions. There have been two main innovations to achieve the improved properties.

1

Re-designed diagonal braces

The improved design of the diagonal braces helps to increase the strength and stability of the truss system. By optimizing the shape and dimensions, the diagonal braces are able to provide better support and withstand higher forces. This helps to improve the overall strength and performance of the truss, making it more effective at supporting heavy loads.

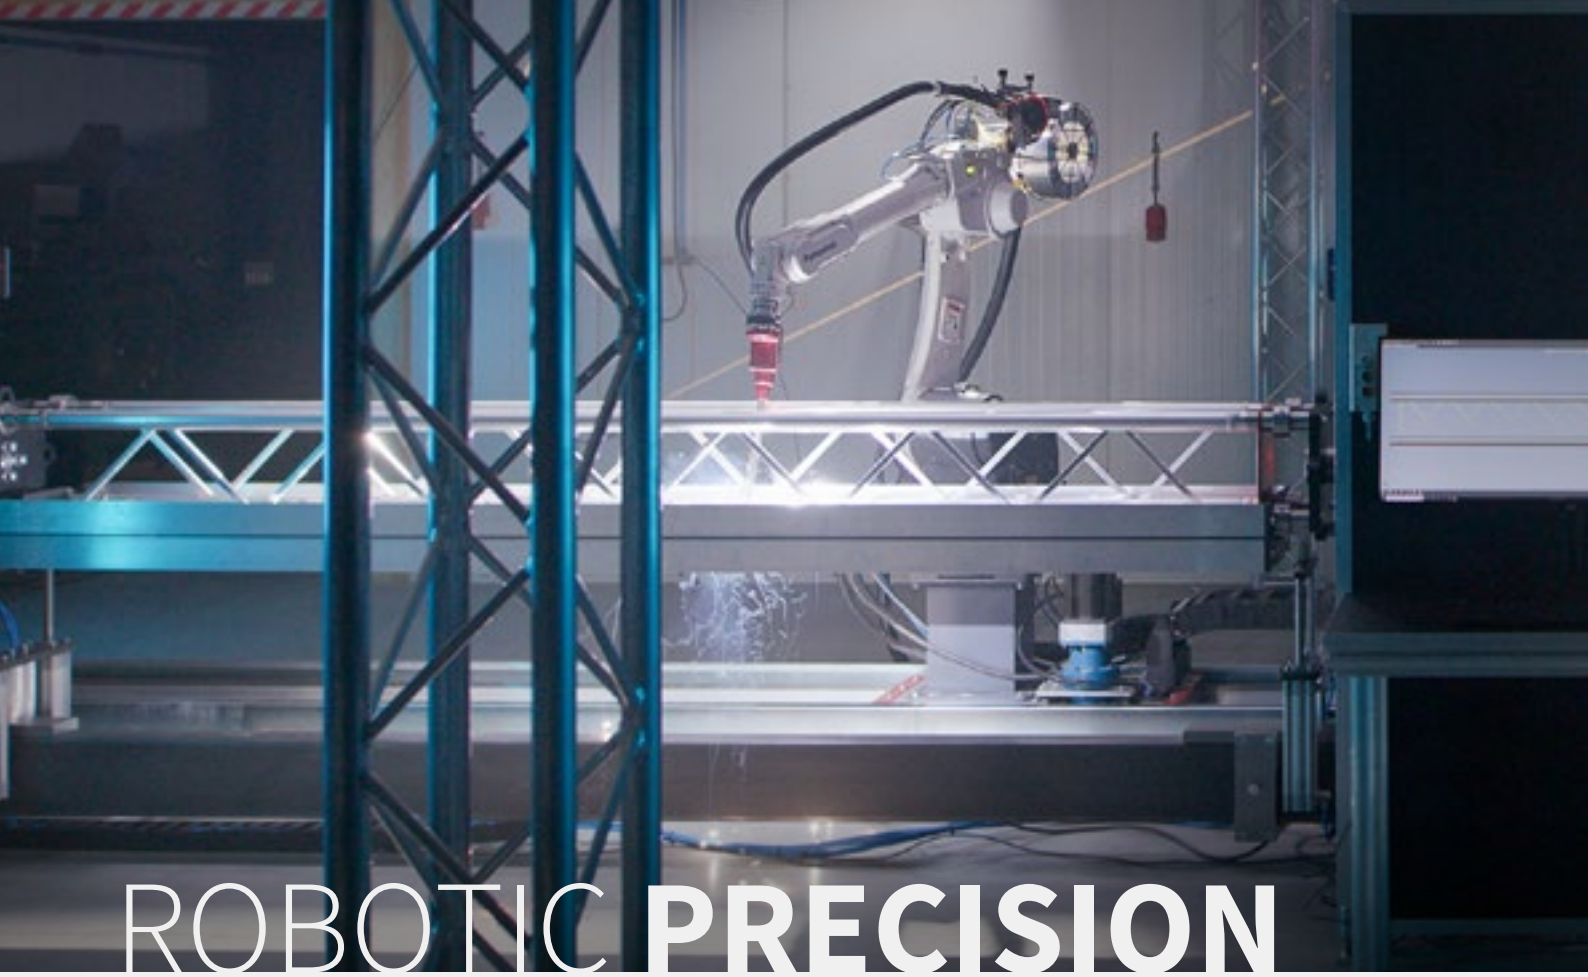
2

Extruded end frame

The use of the extruded end frame contributes to the improved strength and performance of the truss system. By using extruded end frames, the TPM Truss is able to withstand more load without deforming or failing.

In addition to the improved strength, the TPM Truss Series is 100% square and has a perfect fit. This is because the extruded end frames are more precise and uniform in shape, which allows them to more easily and securely attach to other truss components. This can help to improve the stability and strength of the overall truss system, and reduce the risk of failure due to poor connections.

Finally, the removal of the end diagonal allows the inside of the truss to be used for storage and makes it very easy to place uplighters in the truss without the end diagonals interfering.



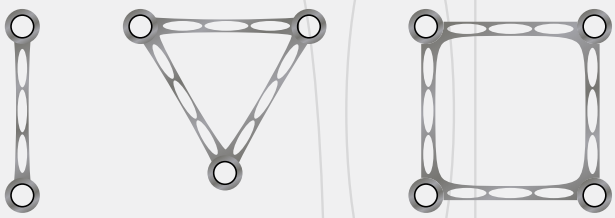
ROBOTIC **PRECISION**

But It's more than just robotizing

At our company, we have gone above and beyond to optimize the production of our TPM truss. Instead of simply robotizing the existing design, as many others do, we have taken a holistic approach to improving our production process. We have not only implemented advanced robotics technology, but we have also adapted the design of the truss to fit the robotized production process as perfectly as possible.

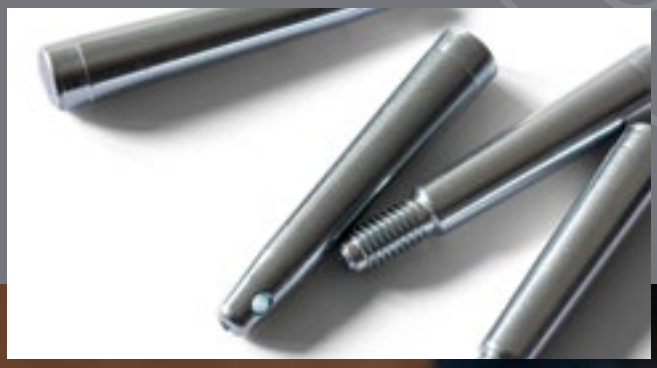
This unique approach has allowed us to achieve maximum output and produce a top-quality product. Our commitment to innovation and optimization has helped us offer some of the shortest lead times in the market, making us a reliable and efficient choice for our customers. We have a team of highly skilled professionals in-house who have the knowledge and expertise to design and maintain both the truss and the robot installation, ensuring that we are always producing the best possible product.

MAXIMUM OUTPUT AND PRODUCE A TOP-QUALITY PRODUCT



TPM Spigot

An additional key improvement we have made to our TPM truss sytem is the change in alloy for the truss spigots. By switching to a stronger alloy, we have been able to increase the strength of the truss.
The new spigot is easily distinguishable from the old spigot because of the changed recessed identification line. These new spigots, along with other optimizations in our production process, have allowed us to offer a product that is up to 25% stronger and more reliable than ever before.



202058 Spigot Model TPM03
202059 Spigot TPM04 M8 Thread

INTERCHANGEABLE

With 100% backwards interchangeability, the TPM truss can be seamlessly integrated into any M29 series setup without any problems. In cases where both truss types are used, customers can simply use the loading tables of the M29 truss for safe and reliable operation.

This backwards interchangeability means that our customers can enjoy all the benefits of the new TPM truss without having to worry about compatibility issues. It's the perfect solution for anyone looking to expand their M29 series and take advantage of the latest innovations in truss technology.

SEAMLESSLY INTEGRATED INTO ANY M29 SERIES

Find complete loading tables on **SIXTY82.nl**

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up, apex-down.
- 2 chords truss to be placed upright, supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.
- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

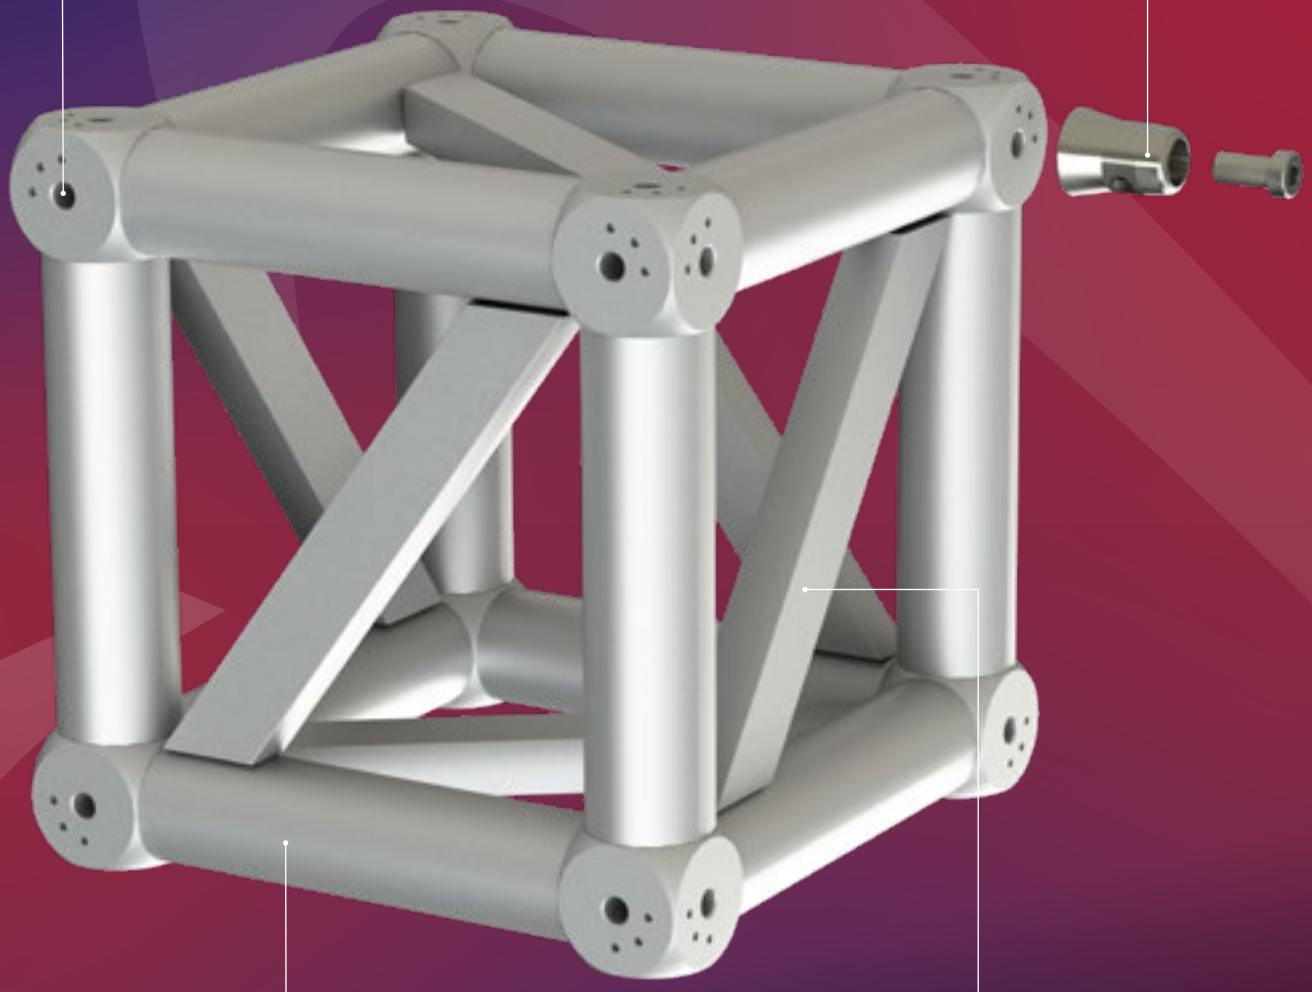
BOX corner
invention evolved

Locator pin design and special male connector will allow much easier user configuration of box corners.

Higher shear force capacity due to lower eccentricity when using male connectors.



Less components giving increased user simplicity and better value.

High allowable bending moment due to bigger diagonal.

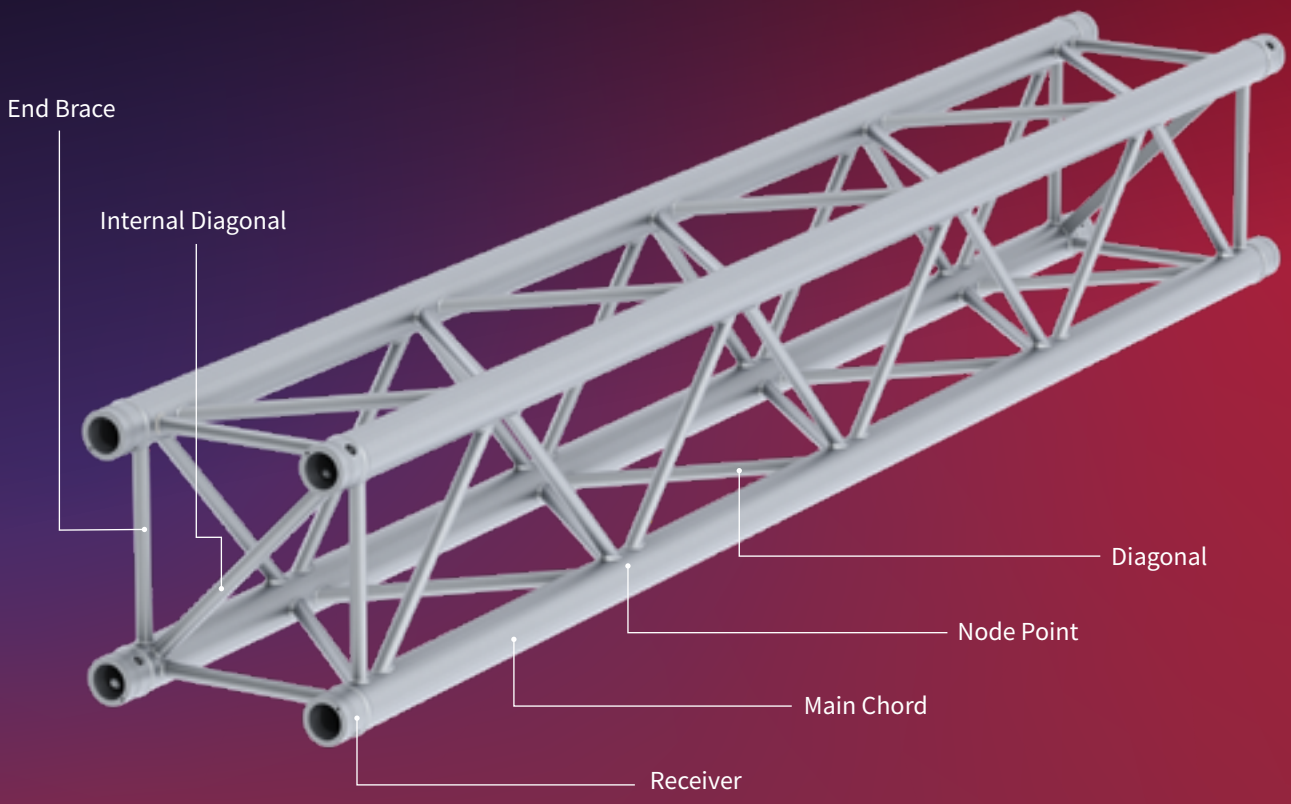
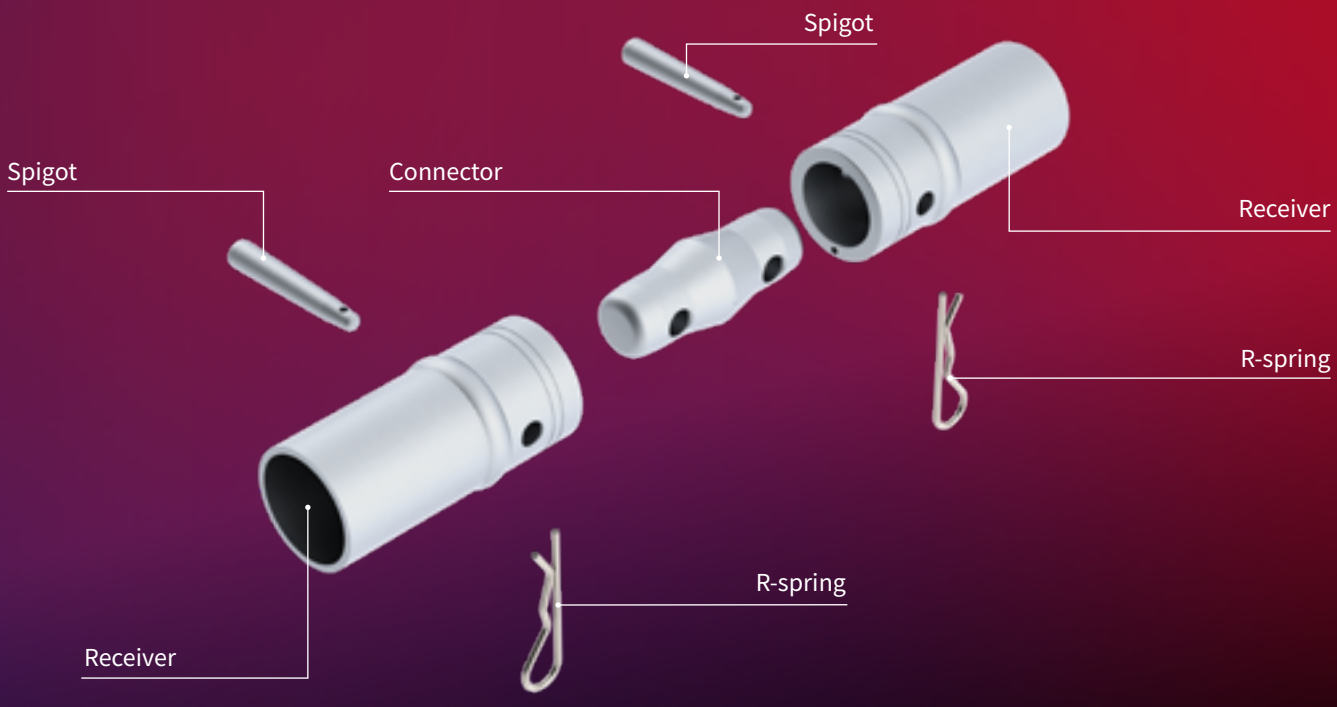
Find complete loading tables on **SIXTY82.nl**

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up, apex-down.
- 2 chords truss to be placed upright, supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.
- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

Truss terminology... **what is what?**





For further information, please refer to the SIXTY82 original user manual.

M Hang-on82

WORLDWIDE PATENT

WHY HANG-ON82?

- **Alternative for the T-joint**
- **Flexible in use: can be used on every point in the grid**
- **Easy to use and assemble**
- **Can be used in conjunction with box corners and weld corners (spacers or special truss length needed)**
- **Can be used for ladder, triangle and square truss**
- **Natural and black finish available**
- **Load capacity 900 KG**

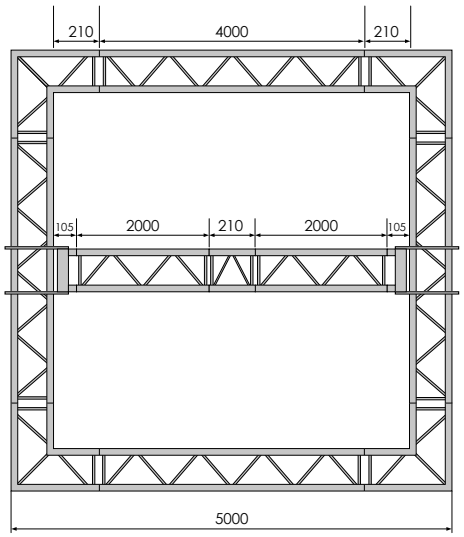
HANG-ON82 SAFETY
251014 0.2 kg

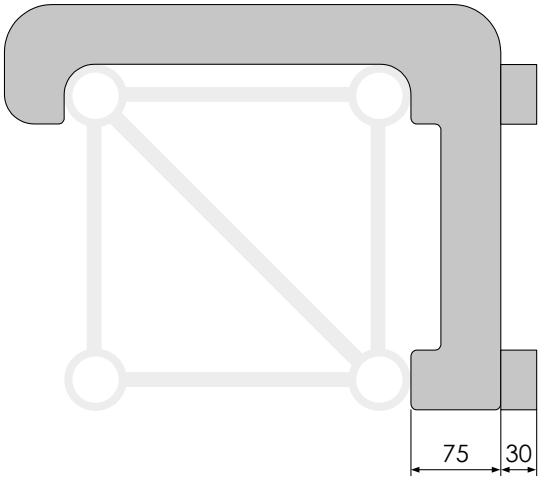
The design of this product is intellectually protected.

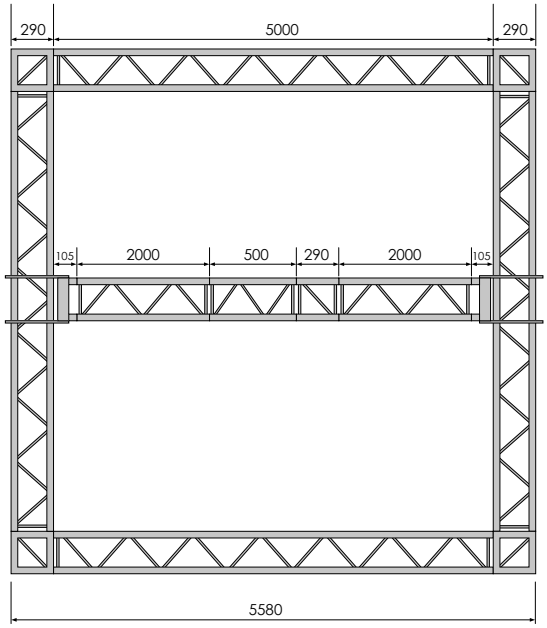
** A truss grid in which the HANG-ON82 is used must be checked by an chartered engineer on a case by case basis.*

Hang-on82 in use

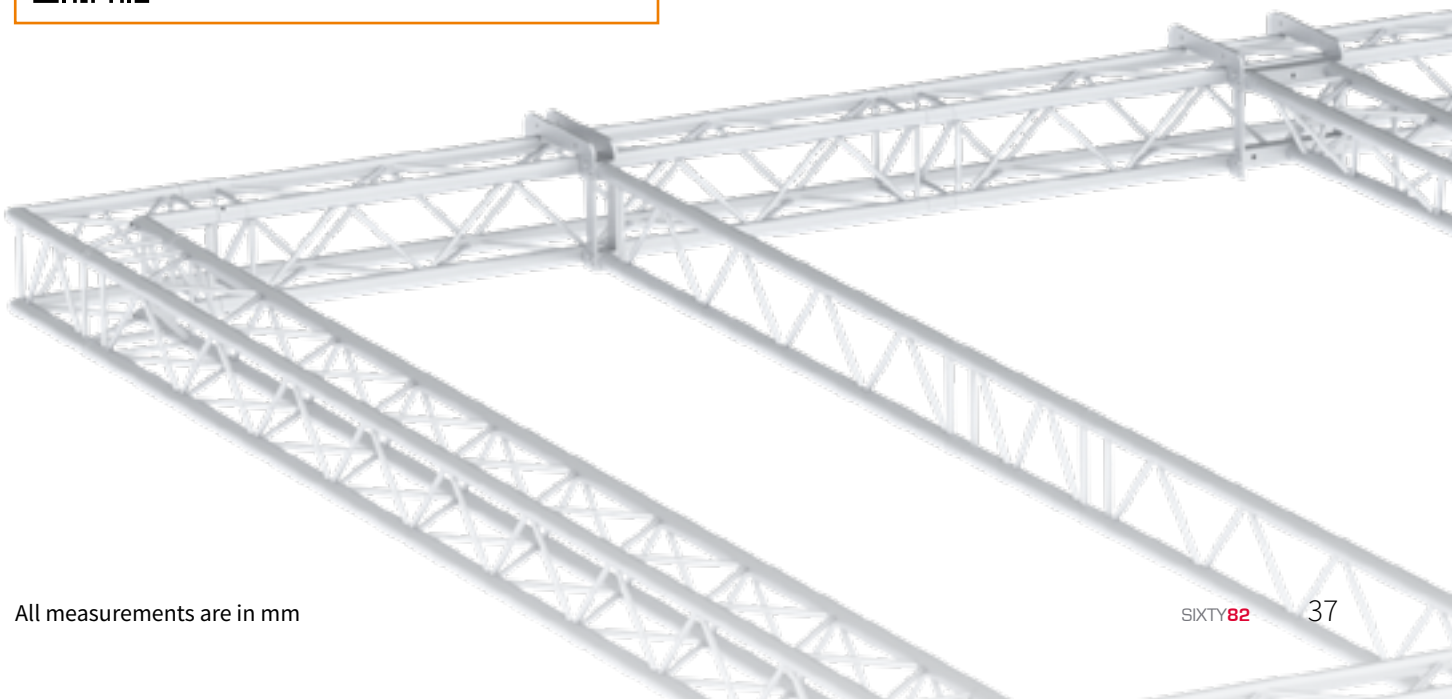
1. The grid is built with **weld corners**: the hang-on needs to be assembled with 30 mm spacers, and an extra piece of 210 mm (or 710 mm) truss needs to be used in the span (spare parts 1, 3 and 4).
2. The grid is built with **box corners with M51 receivers** (75 mm): the hang-on needs to be assembled with M52S connectors, and the same length of truss can be used for the span as is used in the grid (spare parts 1 and 2).
3. The grid is built with **box corners with M52S connectors**: the hang-on needs to be assembled with spacers, and an extra piece of 290 mm truss needs to be used in the span (spare parts 1, 3 and 4).







Scan the QR-Code
to watch the Hang-on82 technical video



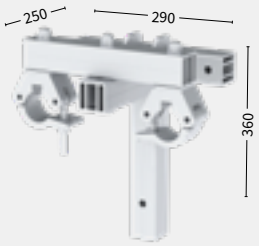
All measurements are in mm

M Wall adapter82

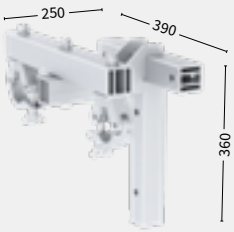
WHY WALL ADAPTER82?

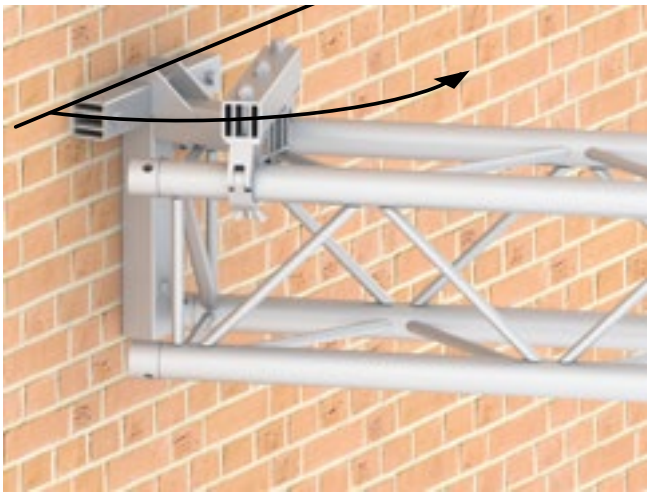
- Unique design
- The width is the same as the truss
- Adjustable position of clamps
- Can be used upright and upside down
- Suitable for triangle, square and rectangular shaped truss
- Can be positioned on an angle
- Suitable for M39R / M29S-T and M39S-T
- Load capacity 500 KG**

WALL ADAPTER M39R / M29S-T
212006 4.35 kg



WALL ADAPTER M39S-T
212009 4.65 kg





** Connection materials for the wall are not included.*

*** The individual wall to which the wall adapter will be connected need to be structurally sound to bear the loads.*

Find complete loading tables on **SIXTY82.nl**

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up. apex-down.
- 2 chords truss to be placed upright. supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.
- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

SIXTY82™

ALPHA 82

MODULAR TRUSS SYSTEM

WORLDWIDE PATENT

Opening new doors

ALPHA82 is a brand-new patented truss system that you can configure to the job ahead. The unique ALPHA connectors can be connected to expertly designed ALPHA ladder trusses (sizes L52 and XL101) to form a 3D truss with similar strength compared to standard trusses with the same dimensions.

The ALPHA connector contains M12 size slots on all 4 sides enabling you to connect accessories such as lifting eyes, clamps, brackets, curtain tracks, trolley beams, braces and/or machinery.

Available in two sizes

Connectable to existing **L52S** and the **XL101R** truss
Available in 4 standard lengths:
50 cm, 100 cm, 200 cm and 300 cm.

Endless possibilities

Once delivered, you can assemble, configure, and let your creativity run free, using either our **'standard' ALPHA connector** or your own configuration to create the shape you need. You can easily adjust your 52 truss from 30 cm width up to 80 cm width with just a couple of bespoke ALPHA connectors and no further investment in truss parts. This results in a much more flexible inventory than your competitors, a lower storage cost due to less warehouse space and, ultimately, a better ROI.

Loading capacity of the Alpha Modular Truss System

Trusses designed from the game-changing **Alpha Modular Truss System** can have different sizes and shapes. To get an idea of the loading capacity of ALPHA trusses we highlight the **ALPHA L52S truss**. The ALPHA L52S truss has the same outer dimensions as the well-known welded L52S truss.

Depending on the ALPHA components chosen in the design of an ALPHA L52S truss, its loading capacities can exceed those of a standard L52S. Using a minimum of components for the ALPHA L52S truss may result in lower loading capacity and stability due to a reduced lateral stiffness depending on the length of a truss span, the amount of supports or the type of load. For custom configurations an ALPHA truss needs an individual structural analysis.

Loading Example:

ALPHA L52S truss with **ALPHA connectors** in the top only, has the same maximum loading capacity as an L52S single straight span or multiple supported span if:

1. The truss modules of the truss span are fully equipped with diagonals between the top chords.
2. The truss span has one diagonal per truss module and is horizontally supported at the top chords every 9 meter.
3. The truss span is horizontally supported at the top every 6 meter.
4. The truss span has equally divided hanging points at a distance of maximum 4.5 meter (multiple supported truss). Example: trusses used for trolley track systems.
5. The truss span is 9 meter long and has one diagonal between the top chords in every truss module.
6. The truss span is 6 meter long.

A reduction of the required loading can result in longer allowable spans, less components and no need for horizontal stabilisation.

Load Capacity Bolt Channel

Type of Bolt Head of Nut	Max Load
M12 Hexagon Bolt Head	600 kg
M12 Hexagon Nut Din 934	600 kg

Values given are for vertical loads only.
Allowable loadings are based on Eurocode EN 1999.
Higher loads are possible. E.g. when square nuts or bespoke inserts are used.
The maximum load shall also be checked in relation with the length of the span of the ALPHA joint.

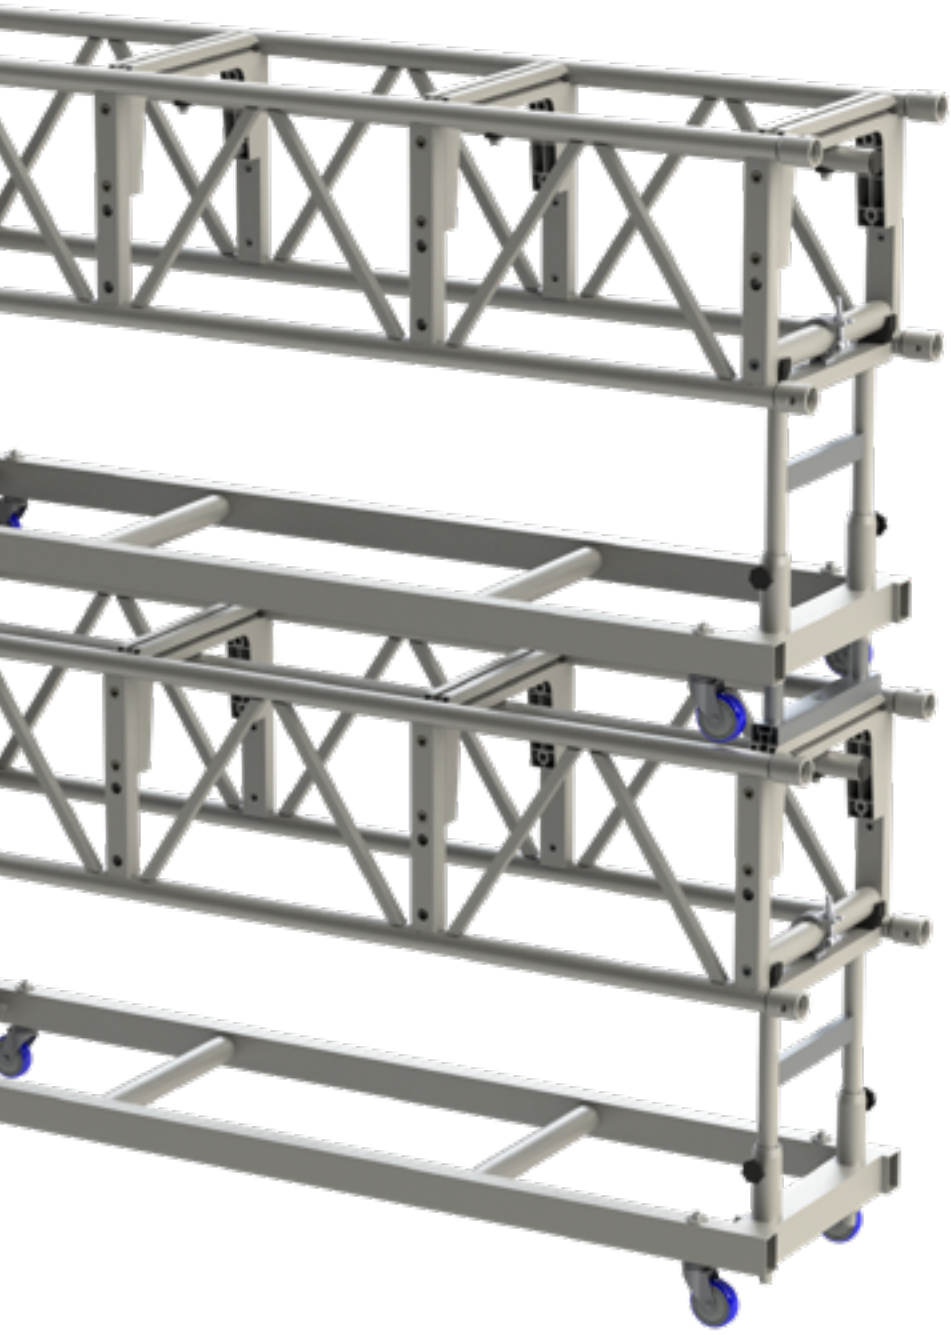
ALPHA
Pre-rig Truss

Introducing the ALPHA82 Pre-rig Truss - the latest addition to our ALPHA truss system. As a leading truss manufacturer, we understand the needs of the AV industry, which is why we've designed the ALPHA82 Pre-rig Truss to offer a convenient and efficient pre-rigged solution that can save time and effort during installation.



The **ALPHA82 Pre-rig Truss** is a modular truss system that can be easily configured and assembled to fit any venue or event space. The **ALPHA82 Pre-rig Truss** is designed with the **ALPHA connectors** that allow for easy attachment of various accessories, including lifting eyes, clamps, brackets, curtain tracks, trolley beams, braces, and machinery. This gives you the flexibility to add the fixtures and equipment that you need for your specific event.

To make installation even more effortless, we offer a foldable dolly that can be used to transport and set up the **ALPHA82 Pre-rig Truss**. The dolly is compact and easy to maneuver, making it ideal for events with tight deadlines or limited setup time.

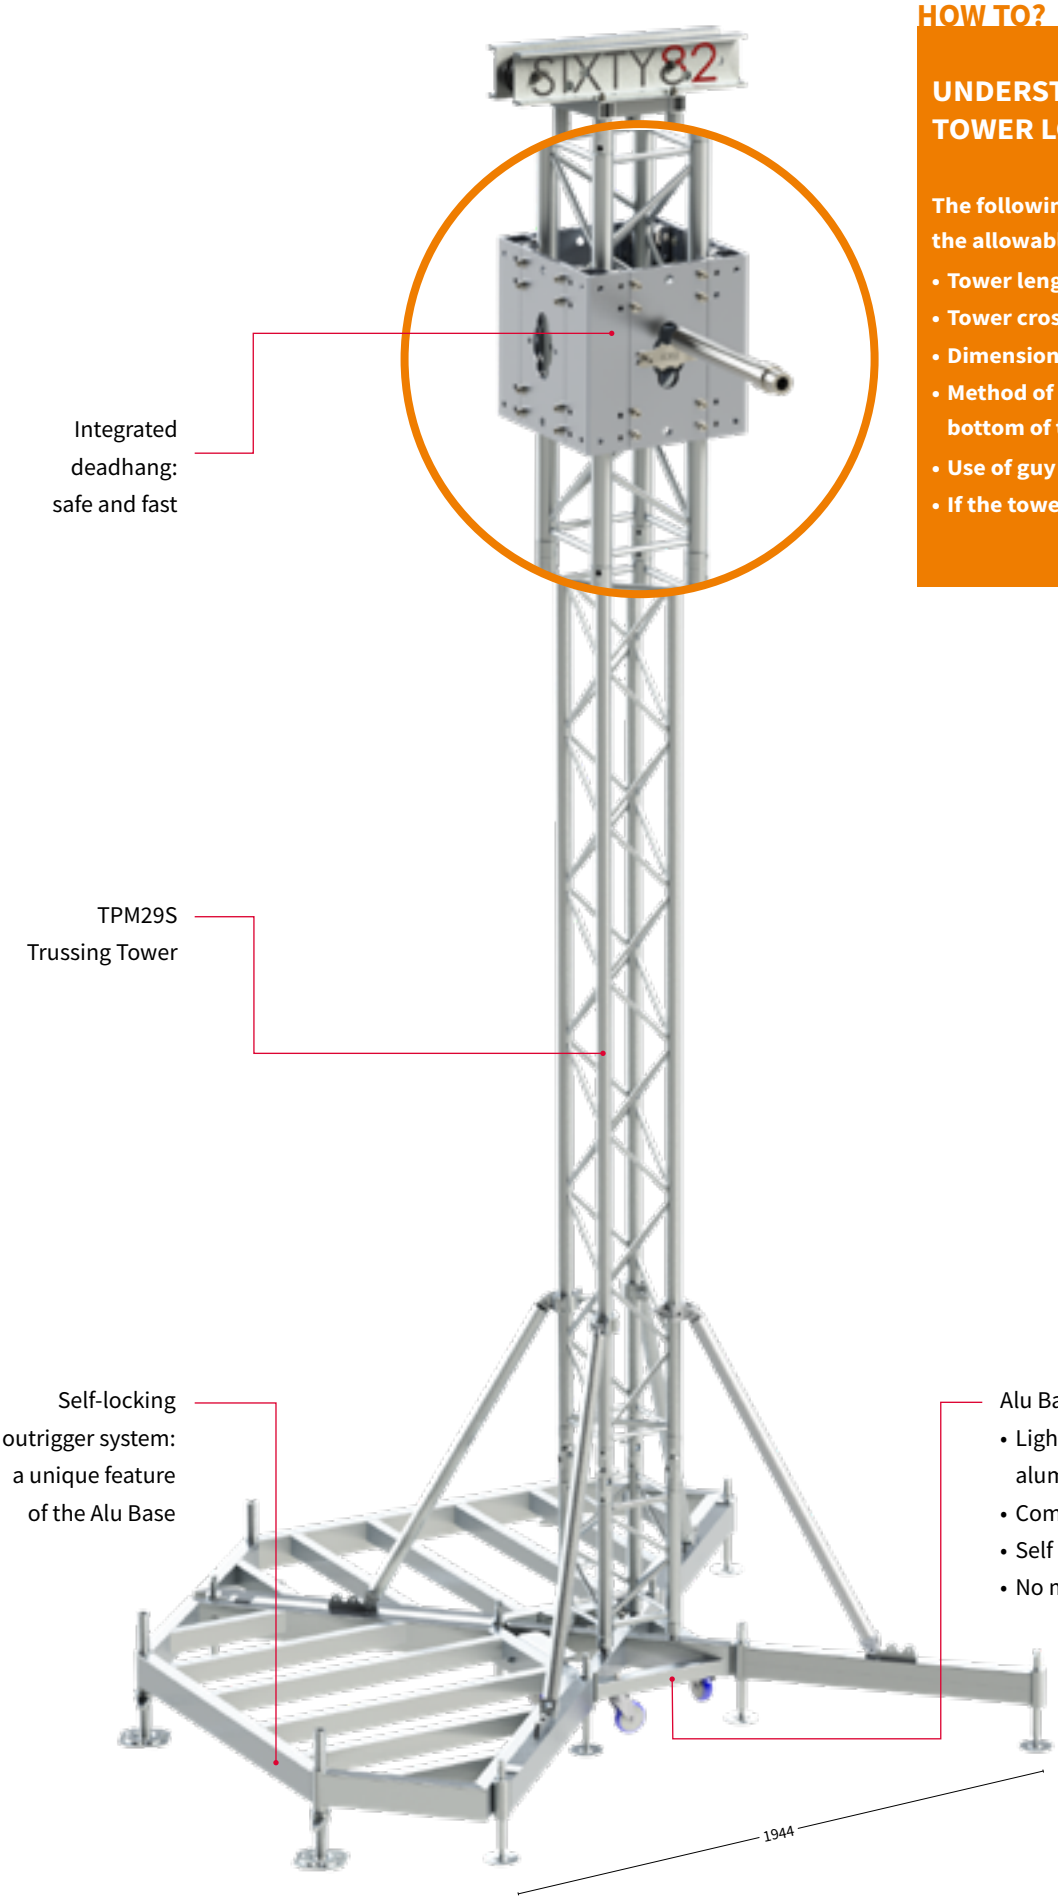
Tower Model M



HOW TO?

UNDERSTANDING TOWER LOADING

The following variables determine the allowable tower loading:

- **Tower length**
- **Tower cross sectional dimensions**
- **Dimension of chords**
- **Method of restraining top and bottom of the tower**
- **Use of guy wires**
- **If the tower base is ballasted**

All measurements are in mm

WHY SLEEVE BLOCK PLATED?

- Completely bolted to avoid weakening due to welding
- Lighter weight due to use of special alloys
- Integrated deadhang system
- Deadhang system restrains the sleeve block in 2 directions, therefore optimised for roof systems
- Radiused edges for ease of handling

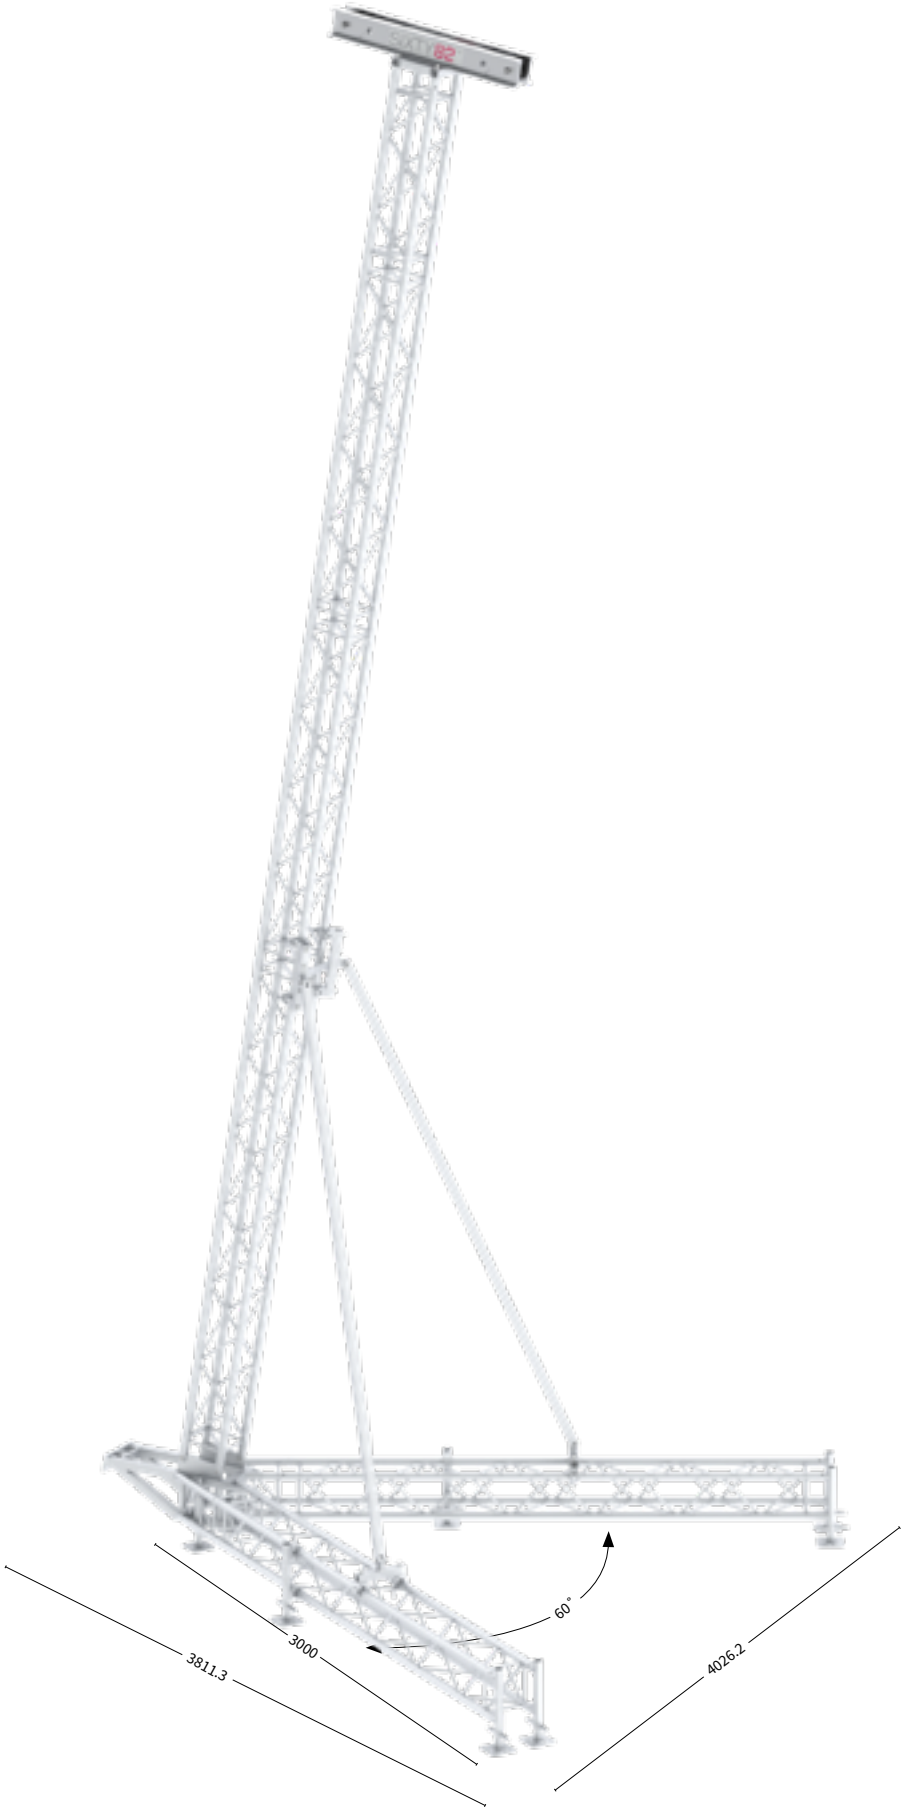
V-Tower Model M



WHY V TOWER MODEL M?

- **Self-Standing tower system to hang PA systems**
- **Minimal ballast required due to its shape**
- **Faster to build, compared to similar systems**
- **Complies with latest EN13814 standard for temporary structures**
- **Small footprint**
- **Use of standard M29S trusses**
- **Lifting help available**

Technical specifications

- Max load 800 kg H = 750 cm
- Front surface 250 cm^2
- Side surface 125 cm^2
- Stabilizing profile
  50 x 50 x 4 x 4 reinforced
- Max windspeed in service 20 m/s

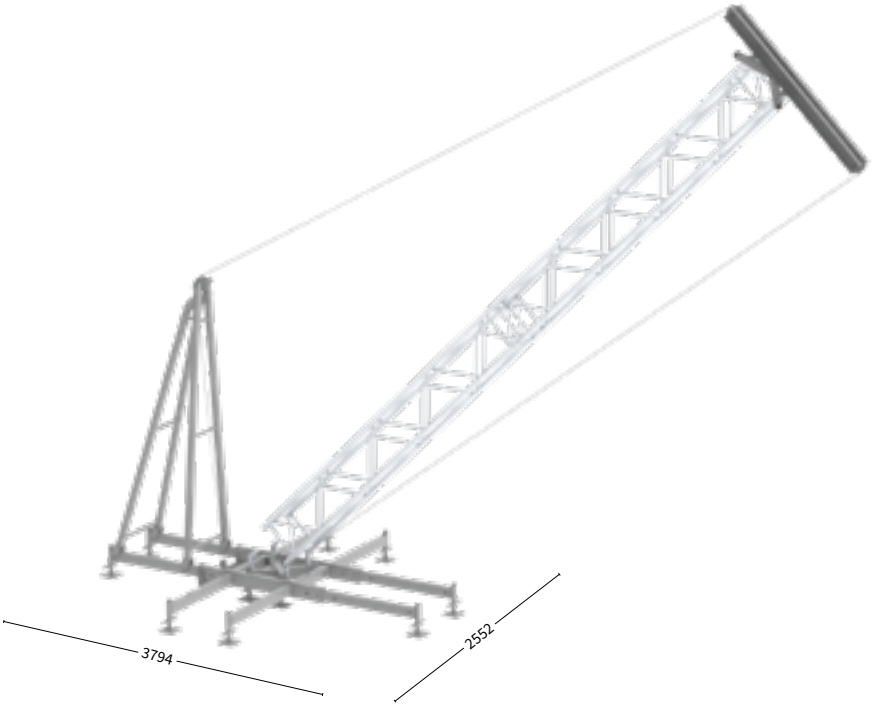
Multibase Tower



WHY MULTIBASE TOWER?

- Multi usable base for all kind of outdoor structures
- Self erecting by means of chain hoist
- Adapts to many different truss types
- Calculated and proven concept
- Can be used in conjunction with roof systems
- One size fits all head section
- Optional truss head
- Head section comes with multiple suspension points
- Calculated for coastal area (WS4) in Germany

Arc Roof

WHY ARC ROOF?

- **Versatile temporary roof structure based on standard trusses**
- **No obstructing guy wires in sides**
- **Bespoke corners can be combined with Model M tower sleeve**
- **Competitively priced**
- **High loading compared to size**
- **Easy set-up by hand or material lifts**
- **Structurally calculated and proven concept**
- **Full aluminium structure**
- **Many options for staging or substructure**
- **Complies with European standards for temporary structures**

	6 x 4 meter *	8 x 6 meter*	10 x 8 meter*
Loading capacity UDL	2100 kg	2441 kg	2502 kg
Loading capacity front cantilever	2 x 250 kg		
Self weight incl. wall canopies	610 kg	682 kg	1282 kg
Max peak gust wind speed in-service	20 m/s (measured at 10 m height)		
Max peak gust wind speed out-of-service	28 m/s		
Max peak gust wind during erecting	10 m/s		
Ballast	Depends on configuration		
Dimensions structure	See drawings		
Dimensions inside for stage platform	6 x 4 m	8 x 6 m	10 x 8 m
Trusses	M29S / M29T		
Canopy	Standard: grey/ black Optional: transparent Optional: other colors		
Staging	Several options possible like aluminium scaffolding system Subframe B		
Structural calculations	EN 13814 / Euro codes		
Miscellaneous	• Canopies fitted in kedar profile • No guy wires in side walls • Optional side wings • Baubuch on request • Structural calculations per EN 13814		

** All data is based on calculated set-up. Other options are possible but need to be investigated on a case-by-case basis.*

WHY ARC ROOF?

Boxcorner Adapter

- Machined plated adapter.
- Zero tolerance fitting of curved parts
- Compatible for triangle and square trusses
- Mountable on standard M29S Box corner

Stabilizer Tubes

- One tube, two pins.
- Hole integrated in curved truss
- Increases building speed
- Machined part adapter.

Sleeveblock Adapter

- Interchangeable with box corner adapter.
- Zero tolerance fitting of curved parts
- Compatible for triangle and square trusses
- Mountable on standard plated sleeveblock.

Ratchet Straps

- Hole integrated in curved truss
- Increases building speed

Sloping Roof

6 x 4 meter

WHY SLOPING ROOF?

- **Structural reports for all building sizes available**
- **No “Baubuch” according German laws required due to building size below 5 m**
- **Short assembling and disassembling times due to conical coupler system**
- **Compact size, small transport size**
- **Maximum safety for audience, technicians and artists, all roof sizes calculated according the latest standards**
- **Attractive design, allows audience best possible view on the stage**

Version

Type	4 x 3	6 x 4	8 x 5
Dimensions structure	4.73 x 3.66 x 4.37	6.73 x 4.63 x 4.63	8.73 x 5.31 x 4.87
Dimensions inside for stage platform	4 x 3	6 x 4	8 x 5

Max. ballast required

Model	per front tower	per back tower
4 x 3	1000 kg (850 kg)	800 kg (600 kg)
6 x 4	1250 kg (1000 kg)	1000 kg (700 kg)
8 x 5	1.450 kg (1.250 kg)	1.150 kg (850 kg)

Figures for a friction coefficient of 0.4 (steel on wood/concrete/gravel/sand)
Figures in brackets for friction coefficient 0.6 (steel on rubber/on wood/on concrete/gravel/sand)
Permanent loads can be calculated as ballast partially

Pay loads for all sizes

Loading type	Back truss	Front truss	Middle truss*
Uniformly distributed load	30 kg/m	30 kg/m	30 kg/m
Central single load	125 kg	125 kg	125 kg
Single load third points	90 kg	90 kg	90 kg
Single load fourth points	60 kg	60 kg	60 kg

* *only building size 8 x 5*

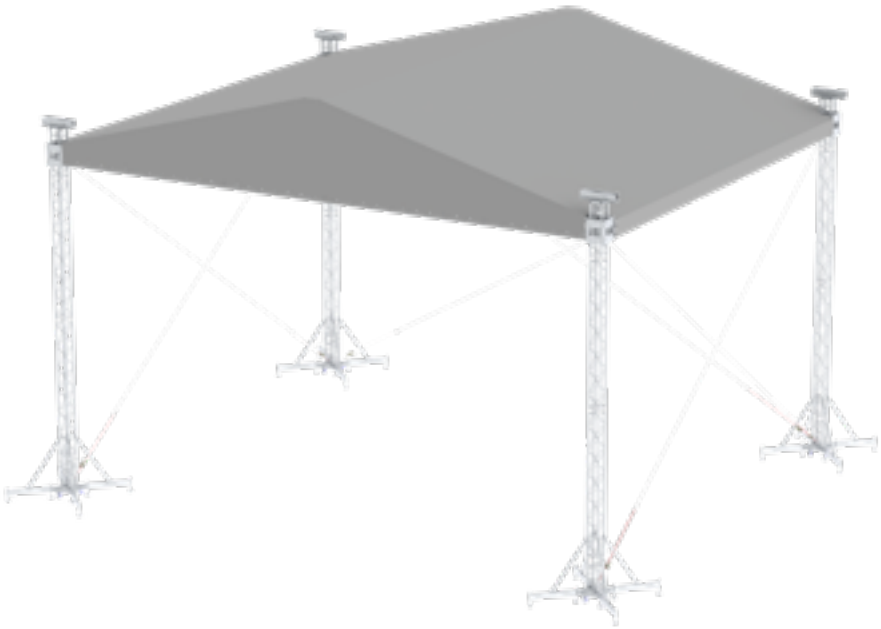
Saddle Roof

12 x 10 meter

WHY SADDLE ROOF?

- **Use of boxcorners instead of bespoke corners**
- **Gable rafter connection form-fit instead of clamps. This is much safer**
- **Gable rafter connection allows much faster set-up**
- **Pinned deadhang system to save time during set up**
- **Less lateral compression braces between rafters required due to use of M39S gable rafters**



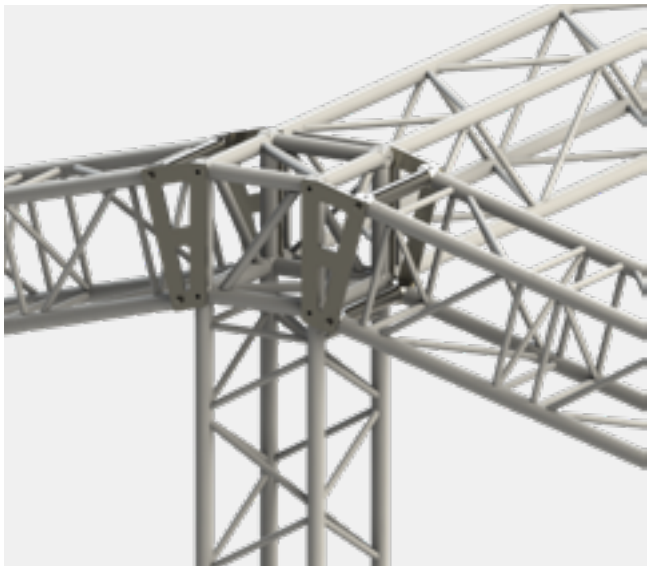
Loading capacity UDL	3982 kg
Loading capacity misc point loads	Depends on configuration
Loading capacity cantilever	1000 kg (4.5 m²)
Self weight incl. wall canopies	2482 kg
Max peak gust wind speed in-service	20 m/s (measured at 10 m height)
Max peak gust wind speed out-of-service	28 m/s
Max peak gust wind during erecting	14 m/s
Ballast	Depends on configuration. Bespoke ballast bases / layher intergration available
Dimensions structure	W12.90 x D10.83 x H9.42*
Dimensions inside for stage platform	12x10 m
Trusses	M39S / M29S / M29T
Canopy	Standard: grey / black
	Optional: transparent / other colours
Staging	Several options possible like aluminium scaffolding system Subframe B
Structural calculations	DIN-EN 13814 / Euro codes
Miscellaneous	• Form fit connection between rafter and grid truss • Use of box corners. No bespoke corners • Auto-release system for wall canopies • Optional side wings • Ground ring or stage intergration for reducing ballast • Intermediate support towers for increased loading • Baubuch on request • M39S gable side rafters to minimise the use of compresion braces • Decreased set up times due to pin fork connections instead of clamps

** All data is based on calculated set-up. Other options are possible but need to be investigated on a case-by-case basis.*

WHY SADDLE ROOF?

Corners

- Machined connection strip
- Highly increased building speed
- One adapter, 6 pins
- Zero tolerance fitting
- No specific building order
- Compatible for every roof size
- Machined plated adapter
- Zero tolerance fitting
- Mountable on standard M39S Box corner
- Compatible for every roof size



Safe System

- Increases building speed
- Strong and secure locking
- All towers exact same height

Stabilizers

- Machined plated adapter
- Zero tolerance fitting
- Mountable on standard M39S Box corner
- Compatible for every roof size

Pitched Roof

14 x 12 meter

WHY PITCHED ROOF?

- **Hurricane proof design (max 40 m/s)**
- **Canopies sit in kedar profiles for ease of build**
- **Auto-release system for wall canopies**
- **Ground ring for reduced ballast**
- **Bespoke tower bases for correct integration of ballast**
- **High load capacity**
- **Full aluminium structure**
- **Many options for staging or substructure**
- **Complies with European standards for temporary structures**

Loading capacity UDL	5645 kg
Loading capacity misc point loads	7000 kg
Loading capacity front cantilever beams	2 x 500 kg
Self weight incl. wall canopies	3197 kg
Max peak gust wind speed in-service	20 m/s (measured at 10 m height)
Max peak gust wind speed out-of-service	28 m/s - 40 m/s
Max peak gust wind during erecting	14 m/s
Ballast	Depends on configuration Bespoke ballast bases
Dimensions structure	W15.08 x D13.96 x H9.93
Dimensions inside for stage platform	14 x 12 m
Trusses	M39S / M39TOW / L52S
Canopy	Standard: grey / black
	Optional: transparent
Staging	Several options possible like aluminium scaffolding system StageFrame82
Structural calculations	EN 13814 / Euro codes
Miscellaneous	• Canopies fitted in kedar profile • Auto-release system for wall canopies • Optional side wings • Ground ring for reducing ballast • Intermediate support towers for increased loading • Baubuch on request • Structural calculations per DIN-EN-13814

LED Screen Support

6 x 4 meter

WHY LED SCREEN SUPPORT?

- **Versatile LED Screen Support structure based on standard trusses**
- **Easy set-up due to fixed base structure**
- **Structurally calculated and proven concept**
- **Full aluminium structure**
- **Use of multibase for easy positioning of ballast**
- **Rafters can be lifted together with erection of tower to save assembly time**
- **Bespoke head section with integrated brace connection for fast set up and less bespoke parts**
- **Possibility to deadhang at ground level which eliminates the need to climb the towers**

WHY SUBFRAME B?

- For STAGE82
- For indoor and outdoor use
- Easy to level
- Extremely easy and fast to build and use
- Adjustable in height
- Integration in roof systems (can replace ground ring)
- Made by reinforced profile
- Internal diagonals integrated
- No adapters needed
- Offers space for ballast
- Rigid construction: can be calculated as ballast weight

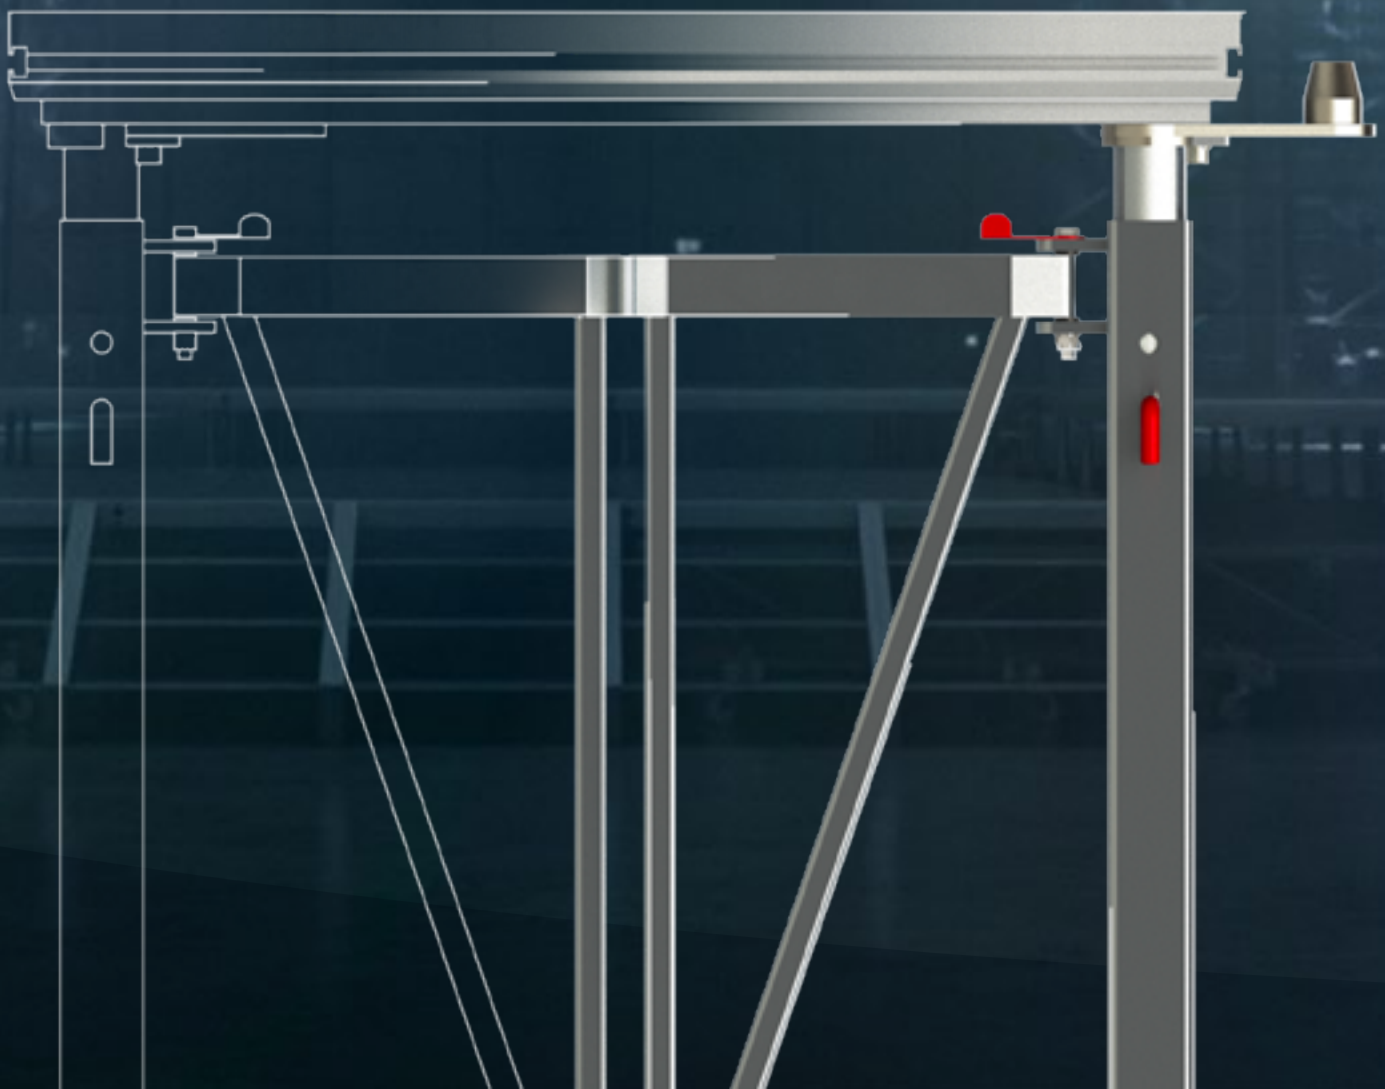
SIXTY82™

ARENA FRAME

WORLDWIDE PATENT



Sixty82 launches the new ARENA FRAME

This new concept is designed for venues which value the benefits of a quick and easy to build stage system. The straightforward design allows big stages to be built in the blink of an eye. A 200 square meter stage can be built in 90 minutes with a crew of 4 and a forklift. Because the frames are foldable, the system has a very small storage footprint.
The ability to build the stage and rig at the same time greatly lowers the time needed to build any stage set.

- World's fastest big stage system
- Easy to use, no tools needed
- Flexible in size and height
- No loose parts, all configurations can be made with the same frames
- Easy to store - small footprint
- Entire stage is movable as one, this allows you to build the rig and stage at the same time

4-WAY adapter

One size fits all Adapter

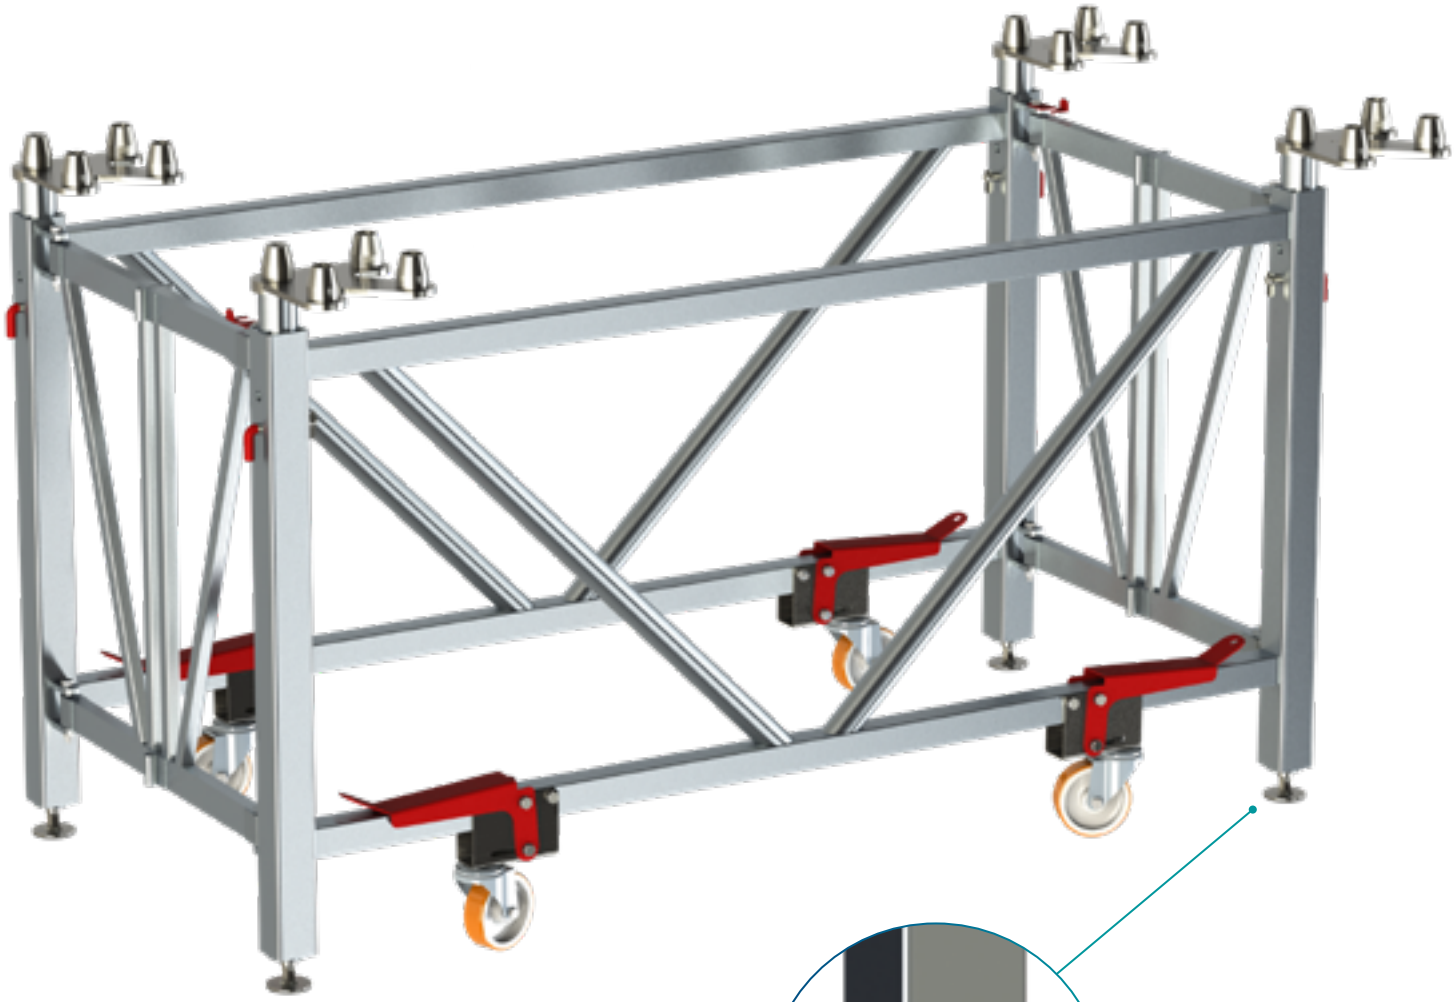
- One size fits all Adapter
- All different configurations can be made with the 4 way adapter.
- Rotatable in 4 orientations
- 500 kg 10% lateral load,
- 200x100 cm decks

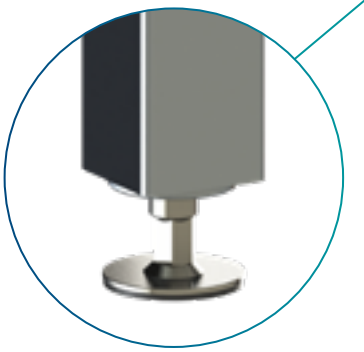
Scan the QR-Code
to watch the ARENA FRAME technical video

360°
Single and double frames (to make even and uneven sized stages)

4 way-adapter
Single and double frames
(to make even and uneven sized stages)

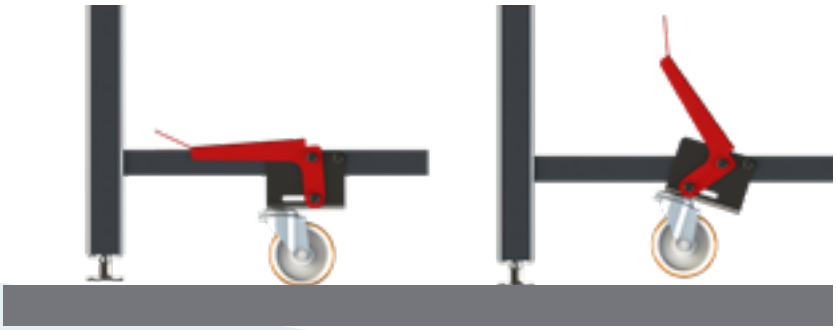
ARENA FRAME



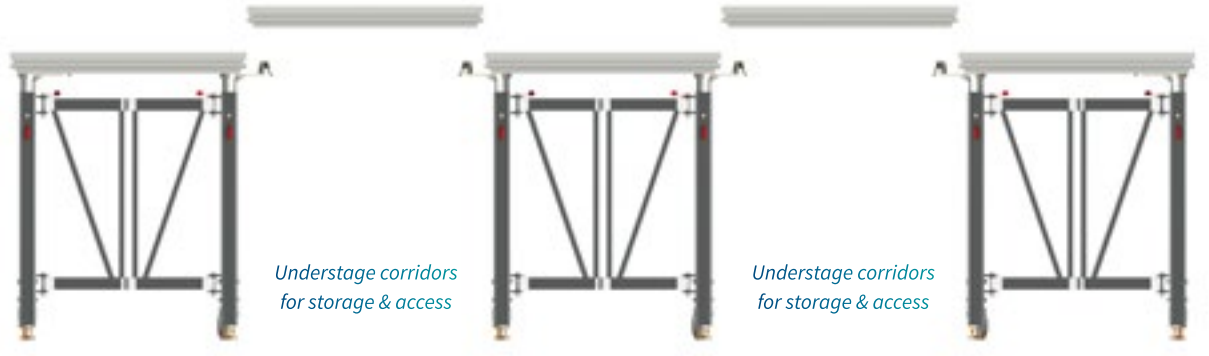


Level your stage
Stage can be perfectly stabilized using the adjustable feet

Rock solid structure
The unique brake system highly increases the stability of the stage.

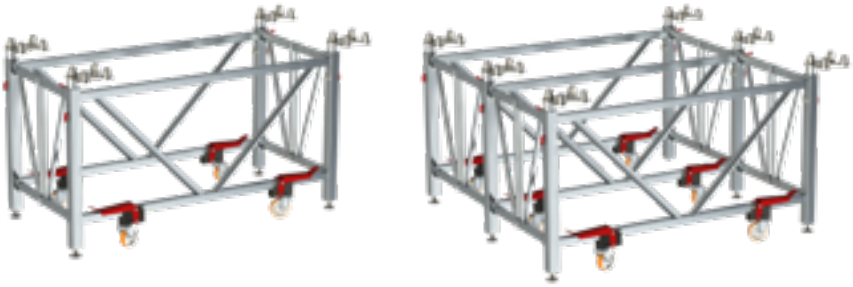


EASY to assemble



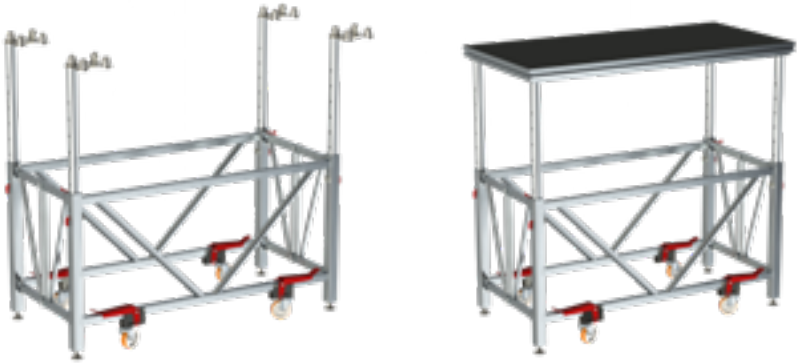
Only two frames needed

Single and double frames (to make even and uneven sized stages)



Height adjustable

Pre-assembled frames can be adjusted in height from 120cm - 190cm (4' - 6') in steps of 5 cm



Foldable frame

Easy to store, the folding frame creates a small footprint

BUILD THIS 200 M² STAGE WITHIN 90 MINUTES!

WHY STAIRS MODULAR?

- **Fits to all stage modules of SIXTY82**
- **A single step unit, one-size fits all**
- **Bolted together to create stair height up to 140 cm**
- **Ideal for transport: optimised packaging volume due to flat-pack-design**
- **Anti-slip Steps**
- **Loading 500 kg/m²**
- **Protected front edge of steps**
- **Integrated handrail connection**

Every element of modular stairs has a total height of 40cm, when mounted properly the height of the stairs will increase with steps of 20 cm.
The formula to calculate the amount of elements needed is:
height of stage in cm / 20 = ... – 1

WHY crate dolly

215009

- Easy on the road storage system
- Endless possibilities
- Can be ordered in many possible configurations
- Crates can not fall out during transport (locking system)
- Available with handles
- Top crate and countertop available
- Including wheels and brakes-system
- Size of DOLLY: from 1x2 till 4x4 crates
- Different size and type of crates
- Light in use

INFERNO®:
The Heat Resistant Soft Sling

The INFERNO® soft sling is made of 100% aramid fibre and therefore ultra heat resistance. The nature of the fibre provides a sling that is extraordinary flexible and therefor much easier to handle compared to a soft steel particularly when slinging truss. The label is movable along the sling and will therefore no longer interfere with proper choking or wraping of truss chords.

The INFERNO® has a WLL of 2000 kg and comes in standard length of 50 cm, 100 cm, 150 cm and 200cm.

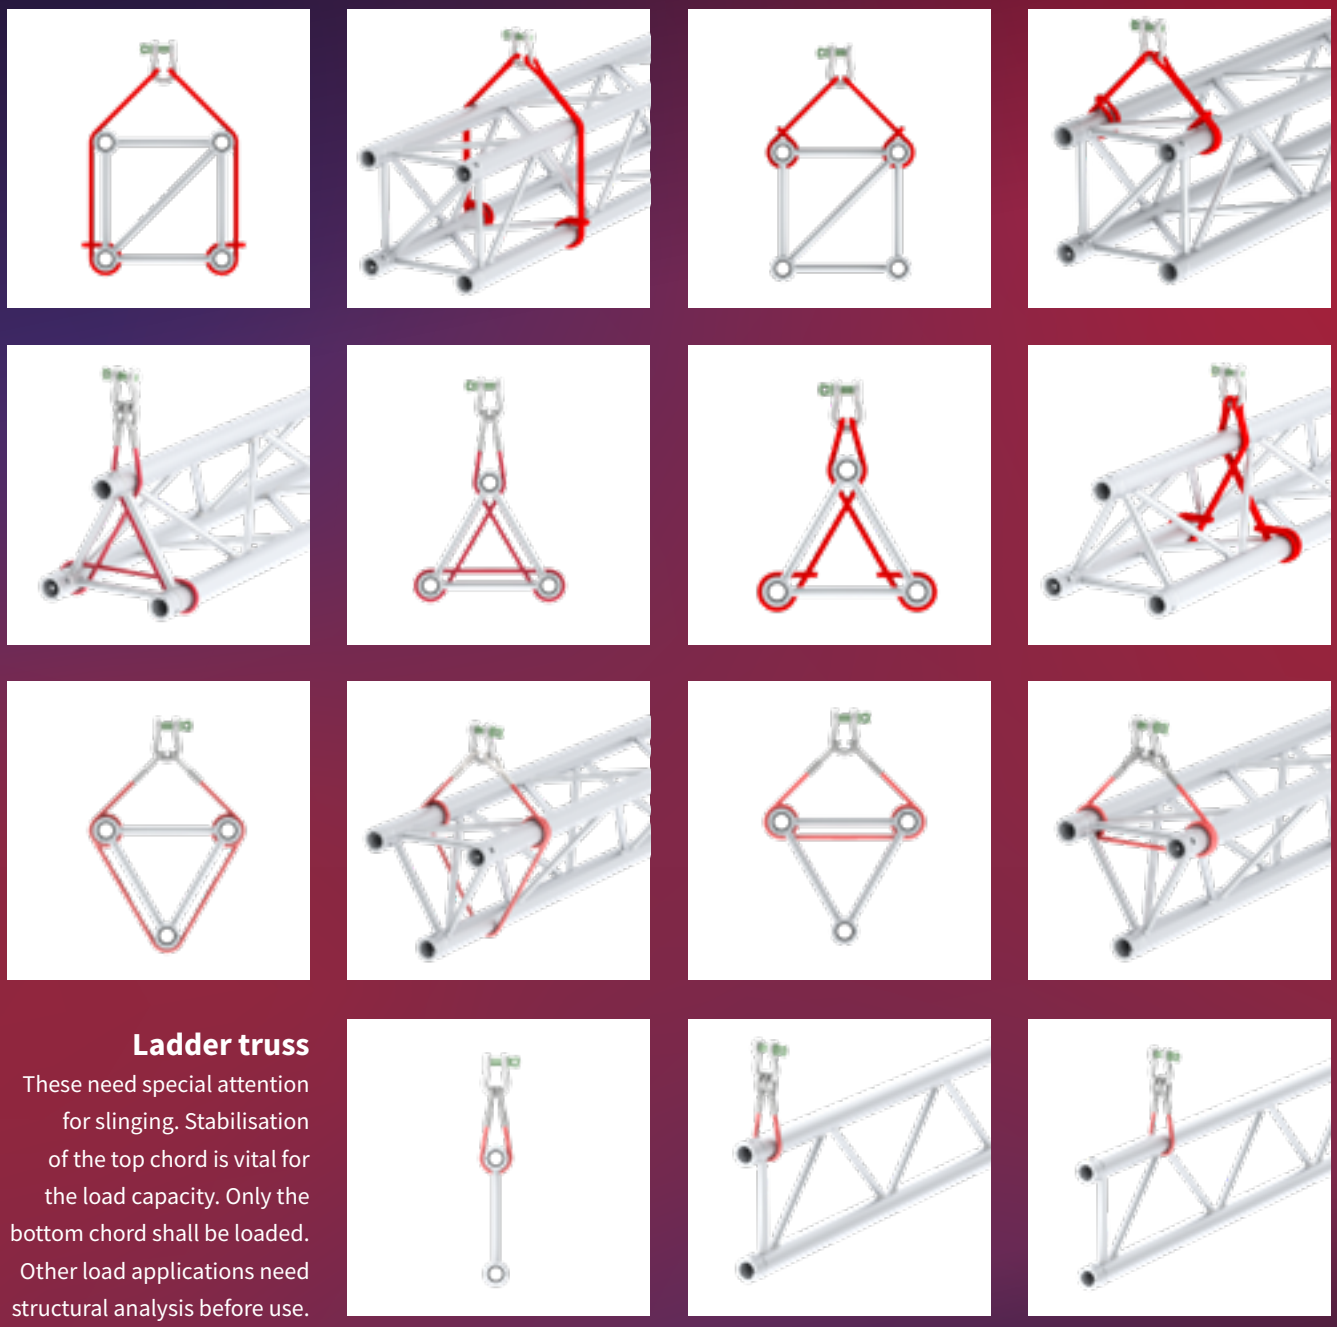
Article code	Description
241050	Inferno Soft sling 50 cm WLL 2000kg
241051	Inferno Soft sling 100 cm WLL 2000 kg
241052	Inferno Soft sling 150 cm WLL 2000 kg
241053	Inferno Soft sling 200 cm WLL 2000 kg

Scan the QR-Code
for more information

Features

- Maintains its strength up to 200 °C(!)
- Easy to position
- Minimum bending radius 6 mm
- Soft, supple, light weight and easy to handle
- Improves workflow
- High abrasion resistance
- Environmentally friendly due to the long-life span
- Creates safer lifting conditions
- Easy to inspect
- Made in The Netherlands
- Custom working loads and lengths optional

User information
Suggested slinging methods



Ladder truss
These need special attention for slinging. Stabilisation of the top chord is vital for the load capacity. Only the bottom chord shall be loaded. Other load applications need structural analysis before use.

Slinging shall be applied solely at the main chords, not at the couplers or internal braces unless approved by a chartered engineer. Slinging shall be applied at node point, or as close as possible aside end braces, diagonals, and horizontal cross braces. Slinging equipment shall be made from non-abrasive and fire retardant materials.

For further information, please refer to the SIXTY82 original user manual.
